Practical No 1

Aim : Using JavaScript In A HTML Document

A. Internal JavaScript
internalJS.html :

```html
<!DOCTYPE html>
<html lang="en">

<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Using JavaScript In HTML</title>
    <style>
        body {
            background: aliceblue;
            color: blueviolet;
        }
        h1{
            text-align: center;
        }
        h2{
            text-align: center;
        }
    </style>
</head>

<body>
    <h1>Using JavaScript In HTML</h1>
    <h2>Internal JavaScript</h2>
    <script>
        document.write("Hello World");
        document.write("<br>");
        document.write(Date());
    </script>
</body>

</html>
```

B. External JavaScript
Index.html :

```html
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>External JavaScript</title>
    <style>
        body {
            background: aliceblue;
            color: blueviolet;
        }
        h1{
            text-align: center;
        }
        h2{
            text-align: center;
        }
    </style>
</head>
<body>
    <h1>Using JavaScript In HTML</h1>
    <h2>External JavaScript</h2>
    <script src="script.js"></script>
</body>
</html>
```

script.js :

```javascript
document.write("<b>Now I am using External JavaScript</b>");
document.write("<br>");
document.write("Hello World");
document.write("<br>");
// Comment In JavaScript
// Date Module Gives Current Date
document.write(Date());
```

Using JavaScript In HTML

External JavaScript

Now I am using External JavaScript
Hello World
